

Empathy Map Template

Date: October 3, 2026	Team ID: SWTID-2026-7578
Project Name: Implement Client Script & UI Policy (Incident)	Maximum Marks: 4 Marks

Empathy Map Guidance:
Create an empathy map to understand your customer/user from four perspectives — what they **Say**, **Think**, **Do**, and **Feel** — in relation to the problem your project addresses. This helps the team build a customer-centric solution.

PERSONA: Alex Vance
IT Service Desk Agent & Incident Filler

SAYS "I need to log critical outages fast without filling out dozens of unnecessary fields manually." "Why isn't the assigned group automatically set when an impact is set to High?" "Users shouldn't be able to edit incident states directly from the list view without opening the record."	THINKS "The platform should automatically enforce required fields so I don't make compliance errors." "Setting high impact should auto-escalate the urgency level immediately to meet strict SLAs." "Client-side scripting makes form navigation smoother and prevents invalid submissions."
DOES - Logs production incidents during high-volume outage calls. - Attempts to save records quickly, sometimes missing mandatory fields like 'Assigned To'. - Uses list view editing to update fields in bulk across multiple active tickets.	FEELS Frustrated: When form submission fails late because required fields weren't clearly enforced upfront. Anxious: About SLA breaches when high-impact tickets lack mandatory assignment details. Relieved: When UI Policies and Client Scripts automate validation dynamically.

PROJECT IMPLEMENTATION MAPPING

1. Task 1 & 2: High Impact UI Policy & Actions
- Addresses **SAYS & THINKS**: Automatically sets Assignment group to mandatory and locks Urgency as read-only when Impact = High.
2. Task 3: onChange Client Script (Auto-set Urgency)

```
function onChange(control, oldValue, newValue, isLoading) {
  if (isLoading || newValue == '') return;
  if (newValue == '1') {
    g_form.setValue('urgency', '1');
    g_form.addInfoMessage('Urgency set to High for High impact incident.');
```

3. Task 4: onSubmit Client Script (Assigned To Validation)
- ```
function onSubmit() {
 if (g_form.getValue('impact') == '1' && g_form.getValue('assigned_to') == '') {
 g_form.showErrorBox('assigned_to', 'Assigned To is mandatory for High impact incidents.');
```

```
}
 return true;
}
```

#### 4. Task 5: onCellEdit Client Script (List Edit Restriction)

```
function onCellEdit(sysIDs, table, oldValues, newValue, callback) {
 alert('State cannot be updated using list editing. Please open the Incident.');
```

```
 callback(false);
}
```
