

Scalability & Future Plan

Date:

15 March 2026

Team ID:

SWTID-2026-7578

Project Name:

Implement Client Script & UI Policy (Incident)

Maximum Marks:

1 Mark

SCALABILITY & FUTURE PLAN

This document outlines how the current project solution can be scaled to handle larger user bases, increased data loads, or extended features in the future. It also captures the team's roadmap for enhancing and evolving the project beyond its current state.

CURRENT SYSTEM LIMITATIONS

S.No	Limitation	Impact	Priority to Address
1	Client-side script execution overhead on large forms with many custom fields.	Slight latency during form load if multiple client scripts trigger simultaneously.	Medium
2	Lack of automated server-side fallback validation (Data Lookup Rules).	Bypassing form UI via REST API could bypass client-side validation rules.	High
3	Hardcoded field choices in UI Policy script conditions.	Requires manual updating if incident categories or impact values are modified.	Low

SCALABILITY PLAN

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Optimized for standard concurrent ITIL fulfiller sessions.	Leverage ServiceNow node auto-scaling and caching mechanisms for enterprise-wide rollouts.
2	Data Storage	Incident records stored standard DB tables.	Implement table partition strategies and automated archive rules for closed incident records older than 1 year.
3	Performance	Client-side onChange scripts running synchronously on form input.	Refactor complex logic to asynchronous GlideAjax calls to prevent UI thread freezing.
4	Security	Form-level UI Policies and Client Script validations.	Enforce strict Access Control Lists (ACLs) and Business Rules for backend data security.

FUTURE ROADMAP

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 2	Server-side validation using Business Rules & Script Includes.	Q2 2026	Ensures 100% data integrity across both UI and API channels.

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 3	Integration with Virtual Agent for automated Incident triage.	Q3 2026	Reduces manual incident creation time and routes tickets instantly.
Phase 4	Predictive Intelligence & Machine Learning Incident assignment.	Q4 2026	Auto-categorizes high impact incidents using historical data patterns.
