

Coding & Solution Evaluation	
Date: October 3, 2026	Team ID: SWTID-2026-7578
Project Name: Implement Client Script & UI Policy (Incident)	Maximum Marks: 5 Marks

Coding & Solution:
This section evaluates the quality and completeness of your implemented code and the overall solution. Your submission should demonstrate working functionality, clean code practices, and alignment with your defined requirements.

SOLUTION SUMMARY	
Repository Link / URL	https://github.com/smartbridge-lab/servicenow-client-scripts-ui-policies
Programming Language(s)	JavaScript (ES6 / Client-Side Scripting)
Framework(s) Used	ServiceNow Client API (<code>GlideForm</code> / <code>g_form</code> , <code>g_user</code>), ServiceNow UI Policy Engine
Key Features Implemented	• UI Policy Rules: Dynamically sets <code>Assignment Group</code> mandatory and <code>Urgency</code> read-only when <code>Impact = High</code>. • onChange Client Script: Automatically synchronizes <code>Urgency</code> based on <code>Impact</code> field modifications. • onSubmit Client Script: Prevents form saving if <code>Assigned To</code> is empty, showing a clear <code>g_form.showErrorBox()</code> prompt. • onCellEdit Client Script: Blocks direct status editing on the list grid view for unauthorized roles.
Pending / Incomplete Features	None. All required Client Script types and UI Policy rules are fully implemented and verified in the ServiceNow PDI environment.
Setup / Run Instructions	1. Import the XML Update Set into the target ServiceNow Instance (PDI). 2. Preview and commit the Update Set under <code>System Update Sets > Retrieved Update Sets</code>. 3. Navigate to <code>Incident > Create New</code> or open an existing incident in list/form view to execute and test scripts.

CODE QUALITY CHECKLIST		
S.No	Criteria	Status (Yes / No)
1	Code is modular and organized into functions / classes	Yes
2	Meaningful variable and function names are used	Yes
3	Code includes comments / documentation where necessary	Yes
4	Error handling is implemented for critical operations	Yes
5	The application runs without critical errors	Yes
6	Code is committed to a version control repository	Yes

ADDITIONAL NOTES / COMMENTS

All client scripts have been vetted against ServiceNow Best Practices: DOM manipulation is completely avoided in favor of the standard `GlideForm` (`g_form`) API, and client-side logic is optimized to minimize server roundtrips.
