

Customer Journey Map Template	
Date: October 3, 2026	Team ID: SWTID-2026-7578
Project Name: Implement Client Script & UI Policy (Incident)	Maximum Marks: 2 Marks

Customer Journey Map Guidance:
Map out the customer's (or IT agent's) experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1: Incident Creation & Urgency Set	Stage 2: Assigned To & Submission Validation	Stage 3: List Editing & Governance Control
Actions What does the customer do?	Service Desk Agent selects High Impact (1 - High) while logging a critical outage ticket.	Agent attempts to save or submit the incident form without populating the 'Assigned To' field.	Incident Manager or Agent opens list view and attempts to change the State field directly from the grid cell.
Touchpoint What part of the service do they interact with?	Incident Form — Impact field & Urgency field (Client-side dynamic UI).	Incident Form Save / Submit button & Assigned To mandatory field.	ServiceNow List View (Grid Cell Editing on State column).
Customer Thought What is the customer thinking?	"I hope setting High impact automatically updates urgency and sets mandatory routing groups so I don't forget."	"Why won't it save? Oh, it highlights the missing 'Assigned To' field clearly before submitting!"	"Can I quickly update the state here in the list view? The system prevents invalid state skips."
Customer Feeling What is the customer feeling?	Anxious / Hurried	Alerted / Guided	Reassured / Compliant
Process Ownership Who is in the lead on this?	Service Desk Lead & ServiceNow UI Policy Developer	Service Desk Fulfiller & Client Script Developer	Incident Governance Manager & System Administrator
Opportunities How can we improve this stage?	Implement UI Policy to lock Urgency & enforce Assignment Group, alongside an onChange Script to auto-set Urgency = 1.	Implement an onSubmit Client Script to validate required fields dynamically and show clear error callouts before server commit.	Implement an onCellEdit Client Script to block direct list editing on critical fields like State.

TECHNOLOGICAL IMPLEMENTATIONS ENFORCING THE JOURNEY

Stage 1: onChange Script (Auto-set Urgency)

```
function onChange(control, oldValue, newValue, isLoading) {
  if (isLoading || newValue == '') return;
  if (newValue == '1') {
    g_form.setValue('urgency', '1');
    g_form.addInfoMessage('Urgency set to High.');
```

Stage 2: onSubmit Script (Assigned To Check)

```
function onSubmit() {
  if (g_form.getValue('impact') == '1' &&
    g_form.getValue('assigned_to') == '') {
    g_form.showErrorMessage('assigned_to',
      'Assigned To is mandatory for High impact.');
```

Stage 3: onCellEdit Script (List Block)

```
function onCellEdit(sysIDs, table, oldValues, newValue, callback) {
  alert('State cannot be updated using list editing.');
```

```
    return true;  
}
```
