

Data Flow Diagram Template

Date: October 3, 2026

Team ID: SWTID-2026-7578

Project Name: Implement Client Script & UI Policy (Incident)

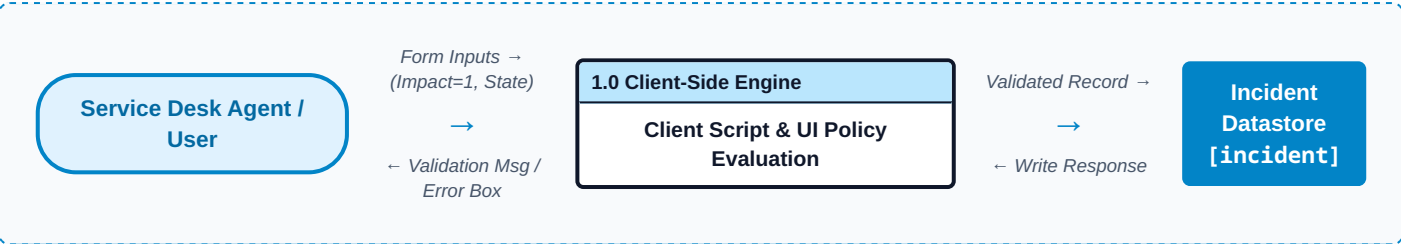

Maximum Marks: 2 Marks

Data Flow Diagram Guidance:
Create a Data Flow Diagram (DFD) to show how data moves through your system — between external entities, processes, and data stores. Use the symbol legend below as a guide.

DFD SYMBOL LEGEND

Symbol	Name	Description
Oval / Rounded	External Entity	A person, organization, or system outside the project that sends or receives data (e.g., User, Fulfiller, External API).
Numbered Rectangle	Process	An activity that transforms incoming data into outgoing data (e.g., Validate Request, Apply UI Policy, Execute Client Script).
Solid Rectangle	Data Store	A place where data is held for later use (e.g., Incident Table [incident], System Logs).
Labeled Arrow →	Data Flow	The movement of data between entities, processes, and data stores, labeled with what data is being passed.

SYSTEM DATA FLOW DIAGRAM (LEVEL 1 DFD)

DETAILED PROCESS & DATA FLOW BREAKDOWN

Process #	Process Name	Inputs & Data Flow	Output / Data Store Interaction
Process 1.1	UI Policy Engine (High Impact Rules)	Input: User updates Impact = 1 (High)	Output: Dynamically sets Assignment Group mandatory & Urgency read-only.
Process 1.2	onChange Client Script (Auto Urgency)	Input: Selection of High Impact	Output: Sets Urgency = 1 & renders info banner: "Urgency set to High for High impact incident."
Process 1.3	onSubmit Client Script (Validation Guard)	Input: Form Submit Trigger with Assigned To check	Output: Rejects submission & shows error box if assigned_to is empty. If valid, writes to [incident] datastore.
Process 1.4	onCellEdit Client Script (List Edit Guard)	Input: Grid cell edit attempt on State column in List View	Output: Triggers browser alert & cancels list update (callback(false)), protecting database integrity.
