

Problem-Solution Fit Canvas Template

Date: October 3, 2026	Team ID: SWTID-2026-7578
Project Name: Implement Client Script & UI Policy (Incident)	Maximum Marks: 5 Marks

Problem-Solution Fit Canvas: Use the framework below to ensure your proposed solution accurately addresses the root causes, behaviors, and limitations of your target audience. Fill out the canvas in the respective boxes just like the original visual template.

1. CUSTOMER SEGMENT(S) [CS] • Service Desk Agents & Fulfillers: Manage day-to-day incident processing and routing. • IT System Administrators: Enforce platform-wide governance and field validation logic.	6. CUSTOMER LIMITATIONS [CL] • Time Constraints: High ticket volume restricts manual field verifications. • Browser & Device Specs: Enterprise desktop browsers with strict JavaScript execution policies.	5. AVAILABLE SOLUTIONS PROS & CONS [AS] • Manual Entry Checks: Pros: Flexible; Cons: High rate of human error and missing mandatory fields. • Server-side Data Lookup: Pros: Reliable; Cons: Slower user feedback loop causing form reload delays.
2. PROBLEMS/PAINS + FREQUENCY [PR] • Incomplete incident forms submitted without mandatory assignment groups. • Accidental list-view bulk editing of incident statuses bypassing rules. • Frequency: Daily during high-volume shift changes.	9. PROBLEM ROOT CAUSE [RC] • Lack of real-time client-side field validation rules before record submission. • List-view editing enabled by default without grid cell level protection.	7. BEHAVIOR + INTENSITY [BE] • Agents rapidly complete fields to meet tight SLA metrics, skipping optional details. • Intensity: High (directly impacts MTTR and SLA resolution times).
3. TRIGGERS TO ACT [TR] • Selection of <code>Impact = 1 (High)</code> on critical incident reports. • Attempting to submit an unassigned incident or edit <code>State</code> directly in list view.	10. YOUR SOLUTION [SL] • UI Policy: Dynamic rule making <code>Assignment Group</code> mandatory and <code>Urgency</code> read-only on High Impact. • Client Scripts: <code>onChange</code> auto-sets Urgency; <code>onSubmit</code> verifies assignment; <code>onCellEdit</code> blocks list edits on State. • Feedback: Clear pop-up banners (<code>g_form.showErrorMessage()</code>) before record submission.	8. CHANNELS OF BEHAVIOR [CH] • Online: ServiceNow Workspace and Native Desktop Form Interface. • Offline: ITIL incident desk triage protocols and team handoff sessions.
4. EMOTIONS BEFORE / AFTER [EM] BEFORE: Frustrated by invalid submissions, incorrect status handoffs, and audit compliance failures. AFTER: Confident in real-time guided input, smooth workflow compliance, and accurate data collection.
