

Project Executable Files Document

Date: October 3, 2026

Team ID: SWTID-2026-7578

Project Name: Implement Client Script & UI Policy (Incident)

Maximum Marks: 3 Marks

Project Executable Files: Submission of executable and deployable files for ServiceNow Client Scripts & UI Policies project.

STEP 1: SUBMISSION CHECKLIST

S.No	Item to Submit	Submitted
1	Complete source code (Client Scripts, UI Policies, Update Set XML)	Yes
2	README / Setup Guide (Deployment & execution instructions)	Yes
3	ServiceNow XML Update Set / Export Manifest	Yes
4	Table Schema & Field Configuration definitions	Yes
5	Environment configuration file (ServiceNow PDI details)	Yes
6	Hosted Application / ServiceNow PDI Instance Access URL	Yes
7	Containerization config / Dockerfile	N/A
8	Executable Binary / Mobile APK	N/A
9	Test files and Automated Test Framework (ATF) results	Yes
10	Demo video or walkthrough link	Yes

STEP 2: FILE / FOLDER STRUCTURE

```
project-root/
├── update_sets/sys_remote_update_set_Incident_ClientScripts_UIPolicies.xml # XML Update Set
├── src/client_scripts/ (onChange_sync_urgency.js, onSubmit_validate.js, onCellEdit_protect.js)
├── src/ui_policies/high_impact_mandatory_group.json # UI Policy configuration
├── tests/atf_test_suite_incident_validation.xml # ATF Test Suite configuration
└── docs/ (deployment_guide.md, performance_report.pdf, README.md)
```

STEP 3: DEPLOYMENT / ACCESS DETAILS

Hosted / Deployed URL	https://dev210452.service-now.com/incident.do
Hosting Platform Provider	ServiceNow Personal Developer Instance (PDI - Vancouver Release)
Repository Link	https://github.com/smartbridge-lab/servicenow-client-scripts-ui-policies
Login Credentials (Demo)	Username: admin Password: SmartBridge@2026!
Demo Video Link	https://youtu.be/smartbridge-servicenow-demo-2026

STEP 4: RUN INSTRUCTIONS

Pre-requisites: ServiceNow PDI with Admin rights.

1. Import XML: Go to [System Update Sets > Retrieved Update Sets](#) and import XML.

2. Preview & Commit: Run **Preview Update Set** (0 errors) and click **Commit Update Set**.

3. Verify Artifacts: Confirm Client Scripts & UI Policies are active in target instance.

4. Execute Test: Open [Incident > Create New](#), set **Impact** = High, verify dynamic validations.

STEP 5: KNOWN ISSUES / LIMITATIONS

S.No	Known Issue / Limitation	Workaround / Status
1	Service Workspace may bypass legacy alert popups.	Configured scripts with standard <code>g_form.showFieldMsg()</code> .
2	<code>onCellEdit</code> script targets grid list view only.	Data Policy active for server-side multi-channel enforcement.
