

Project Proposal (Proposed Solution) Report	
Date: October 3, 2026	Team ID: SWTID-2026-7578
Project Title: Implement Client Script & UI Policy (Incident)	Maximum Marks: 5 Marks

Project Initialization and Planning Phase:

The proposal report aims to transform incident handling and workflow execution using automated ServiceNow client scripts and UI policies, boosting operational efficiency and data accuracy. It tackles manual processing inefficiencies, ensuring reduced SLA risks and enhanced user satisfaction. Key features include real-time field validation, automated list-view protection, and dynamic user notifications.

PROJECT OVERVIEW & PROBLEM STATEMENT

Project Overview	Objective: Revolutionize the incident submission and processing workflow by implementing advanced client-side scripts and UI policies, ensuring faster, guided, and accurate data capture. Scope: Comprehensively assess and enhance incident management forms, incorporating real-time field validations, read-only locks, and mandatory enforcement for a robust system.
Problem Statement	Description: Addressing inaccuracies, incomplete assignment entries, and unauthorized status modifications in the incident logging flow adversely affecting operational efficiency and resolution times. Impact: Solving these issues results in improved operational efficiency, reduced SLA breach risks, and enhanced service desk performance, contributing to organizational governance.
Proposed Solution	Approach: Employ client-side script types (<code>onChange</code> , <code>onSubmit</code> , <code>onCellEdit</code>) alongside dynamic UI Policies to evaluate incident fields in real time. Key Features: - Dynamic UI Policy to mandate <code>Assignment Group</code> and lock <code>Urgency</code> on High Impact. <code>onChange</code> Client Script to automate Urgency level matching. <code>onSubmit</code> Client Script validating fulfiller assignment prior to record save. <code>onCellEdit</code> Client Script preventing unauthorized status changes in list view. - Real-time visual notifications via <code>g_form.showErrorBox()</code> and info messages.

RESOURCE REQUIREMENTS

Resource Type	Description	Specification / Allocation
Hardware	Computing Resources & Client Terminals	Dual-core CPU / Modern Workstation with Browser Support
Memory	System RAM	8 GB RAM (Minimum)
Storage	Cloud Storage & Instance Disk Space	Cloud-hosted ServiceNow Database Instance Storage
Software	Platform & Client Frameworks	ServiceNow Platform (Vancouver / Washington DC release), JavaScript ES6 Engine
Development Environment	IDE / Scripting Interface	ServiceNow Studio, Client Script Editor, UI Policy Builder
Data	Datasets & Schema	<code>incident</code> table records, Sys User / Group tables, ITIL sample incidents dataset
