

Technology Stack Template

Date: October 3, 2026

Team ID: SWTID-2026-7578

Project Name: Implement Client Script & UI Policy (Incident)

Maximum Marks: 2 Marks

Define Your Technology Stack:
Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

TECHNOLOGY STACK DETAILS

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side (e.g., React, Angular, HTML/ CSS)	ServiceNow Form Engine & JavaScript (ES6)	Provides responsive dynamic client-side rendering. Enables instantaneous form field manipulation, validation messages, and UI policy condition execution without full page refreshes.
2	Backend / Server-Side (e.g., Node.js, Python/Django, Java)	ServiceNow Glide API & Rhino Engine	Processes server-side validation rules, business logic execution, and record persistence cleanly. Ensures seamless integration with platform-level data workflows.
3	Database / Data Storage (e.g., MySQL, MongoDB, PostgreSQL)	ServiceNow MariaDB / Relational Store	Stores normalized record data across the <code>incident</code> table. Supports indexed fast querying, audit logging, and transactional integrity across high-volume ticketing.
4	Cloud / Hosting / Deployment (e.g., AWS, Azure, Heroku, Docker)	ServiceNow SaaS Enterprise Cloud	Eliminates local infrastructure management, offers multi-tenant isolation, automatic high-availability failover, and instant environment provisioning.
5	Version Control & CI/CD (e.g., GitHub, GitLab, Jenkins)	ServiceNow Update Sets & Git Integration	Tracks precise code changes across Client Scripts and UI Policies, enabling seamless migration from Development to Test and Production instances.
6	Third-Party APIs / Other Tools (e.g., Stripe, Twilio, Google Maps)	GlideForm (g_form) & GlideList APIs	Specialized client APIs that enable dynamic control over field mandatory/read-only states, pop-up error boxes, info banners, and list-view cell editing controls.
